Problem Statement:-

The rapid growth of e-commerce platforms generates a large volume of transaction data daily. Analyzing this data is essential to understand customer behavior, product demand, and sales trends.

The objective of this project is to process and analyze e-commerce transaction data using Big Data technologies. The system aims to identify the top-selling products and determine peak sales time by handling data efficiently using the Hadoop ecosystem.

This analysis helps businesses make data-driven decisions, improve inventory management, and optimize sales strategies.
